

Humans learn in the same way as other animals	The environment is the most important influence on behaviour	You need to consider what happens inside the organism
People are information processors, similar to computers	Psychologists should use scientific methods	Psychologists should study animal behaviour
Within limits, people are able to choose how they behave	People do not have free will	It is useful to study what goes on in people's brains
People learn how to behave from their experiences	People learn how to behave from observing others' experiences	People's behaviour is influenced by how they make sense of the world
