

**Patient**

- You have been wrongly diagnosed with schizophrenia and hospitalised. You must try to convince the doctor that this was a mistake and that you should be discharged.

**Patient**

- You have been wrongly diagnosed with schizophrenia and hospitalised. You must try to convince the doctor that this was a mistake and that you should be discharged.

**Doctor**

- Your patient has schizophrenia with prominent paranoid features and has been hospitalised. She does not have insight into the fact she is ill. You are concerned that if released she will harm herself or others and so you must try to convince her to remain in hospital.
